

DELUXE

spring reverb and harmonic-vibrato

That is just delicious!

Thank you for supporting Mr. Black and riding the wave with the DeluxePlus Plus. Relax. Ease the seat on back. We're gonna take a slow ride up and back down Classic Tones Road.

Every Mr. Black pedal is designed and handmade in the rainy pacific-northwest; on the "south-easy" side of Portland, OR.

The DeluxePlus Plus is designed to bring one classic, and one rare sound (spring reverb and harmonic-vibrato) to whatever amp you're working with. And it is great.

Firing it up:

- Find a nice place to play. We recommend a calm beach bathed in white sand and lined with palm trees. Your jam space will be fine too tho.
- Connect your guitar to the input jack (right side) and your amp to the output jack (left side).
- Start with all the knobs set straight up and down.
- Depress the footswitch and fully feel that enticing wiggle-wobble.

Features:

- Spring reverb and genuine harmonic-vibrato.
- Use each effect individually or together for that vintage-y, vibe-y, voluptuous-y mood and feeling.
- Waaayyy more drippy reverb available than your amp can deliver.
- Mesmerizing, throbbing, true harmonic-vibrato.
- True-bypass
- 9VDC power (2.1mm negative center pin adapter) or internal 9V battery

To replace the 9V battery, grab your trusty philips head screwdriver and remove the four screws holding the backing plate on. The battery sits right below the foot-switch. I think you can handle the rest.

If you haven't already, join the Black List for news, specials, promos and even the occasional hot dog.

Visit:

www.mrblackpedals.com to sign up. Its free. And free is a good color on me.

Controls:

- INTENSITY: Adjusts vibrato intensity
 - Full CCW: Off (reverb only)
 - Full CW: Max depth/intensity
- REVERB: Adjusts reverb level
 - Full CCW: None (vibrato only)
 - Full CW: Soo much drippiness
- SPEED: Adjusts vibrato speed
 - Full CCW: Slow
 - Full CW: Fast
- BYPASS SWITCH: Toggles on/off
 - LED on: **DELUXE! PLUS! +!**
 - LED off: maaaaannnn.

Tech stuff:

- Input impedance: ~500K Ω
- Output impedance: ~2K Ω
- Bypass: True-Bypass
- Current draw: <60mA
- Power requirement: 9VDC adapter or 9V battery
