

# THUNDERCLAW

*high-gain distortion machine*

The crushing power of thunder. Now with razor-sharp claws.

Thank you for supporting Mr. Black and playing the one and only ThunderClaw. You are about to write a lot of new riffs.

Of course, every Mr. Black pedal is designed and handmade in the rainy pacific-northwest; smack dab in south-east Portland, OR.

The ThunderClaw is a downright mean, ruthless pedal featuring fully active user controls, and their range, dynamic response and sonic qualities are truly unmatched by any other pedal. Hell, only a few amps can pull this off.

## Firing it up:

- Turn your amp up **as loud as you can** and throw away any earplugs you have. This thing isn't about being "civilized."
- Plug in your guitar to the jack on the right side of the pedal, your amp into the jack on the left side of the pedal.
- Start with all the controls at noon and give the footswitch a stomp. It's time to riff.

## Features:

- Beautiful high-gain distortion that cleans up with your attack and volume knob like you've never, ever heard or felt.
- Active Output, Treble and Bass controls cut or boost their namesakes.
- Internal +/- 9V split-rail power for stupidly quiet operation.
- True-bypass
- 9VDC power (2.1mm negative center pin adapter) or internal 9V battery.

To replace the 9V battery, grab your trusty philips head screwdriver and remove the four screws holding the backing plate on. The battery sits right below the foot-switch. I think you can handle the rest.

If you haven't already, join the Black List for news, specials, promos and even the occasional hot dog.

Visit: [www.mrblackpedals.com](http://www.mrblackpedals.com) to sign up. It's free. And free is a good color on me.

## Controls:

- **OUTPUT:** Active Output control
  - Full CCW: No output
  - Full CW: Pummeling volume
- **DISTORT:** Distortion threshold
  - Full CCW: Very little distortion
  - Full CW: Lots of distortion
- **BASS:** Active Bass control
  - Full CCW: Full bass CUT
  - Noon: No bass boost/cut
  - Full CW: Full bass BOOST
- **TREBLE:** Active Treble control
  - Full CCW: Full treble CUT
  - Noon: No treble boost/cut
  - Full CW: Full treble BOOST
- **BYPASS SWITCH:** Toggles on/off
  - LED on: **FUCK. YES.**
  - LED off: Boooooorrrriinnnngg.

## Tech stuff:

- Input impedance: ~470K $\Omega$
- Output impedance: ~1K $\Omega$
- Bypass: True-Bypass
- Current draw: ~27mA
- Power requirement: 9VDC adapter or 9V battery
